

Ben McMurtrie

<https://linkedin.com/in/ben732> - <https://bmcm.nz> - mcmurtrie.ben@gmail.com

I have recently completed my Software Engineering degree at the University of Auckland and am seeking a role in a challenging and fast paced environment with opportunities to learn and grow. I have hands-on experience in full-stack web development, along with strong interests in software deployment, networking, and broader systems engineering.

WORK EXPERIENCE

Front end Software Engineering Intern at Canva

December 2024 – February 2025

- Worked on the **editing performance** team to add new functionality to the in-house **Web Worker** Framework.
- Designed and implemented multiple new core functionalities to the framework.
- Wrote/updated tests to provide a high percentage of coverage for all my code across a range of areas.
- Participated in a **performance-based hackathon** where I implemented a lint rule to help prevent mobile crashes.
- Helped diagnose and debug a worker /CSP error causing a high error rate among a small percentage of users.

Software Engineering Intern at Tidy International

November 2023 - February 2026

- Full stack web development using a **C# .Net API** and an **Angular** frontend with a custom in-house UI library.
- Developed scripts/tools to improve internal processes and reduce engineering time wasted on them by >90%.
 - Created a **CLI** for interacting with and managing all the microservices the development team works on.
 - Designed and created custom **CI/CD pipelines** for multiple internal libraries automating various deployments.
 - Consolidated linting and formatting configuration into a **central project** to synchronise between projects.
- Led an infrastructure project to migrate codebase to a single mono-repo and reduce deployment times
- Led a cost optimisation project yielding a 15% reduction in cloud billing. With annualised savings of over **\$40,000**

EDUCATION

Bachelor of Engineering (Honours) - Software Engineering

University of Auckland

- Finished degree November 2025 with First Class Honours - 8.3 / 9 GPA (A+)
- Dean's honours list – 2022, 2023 & 2024, First in Course SOFTENG 281 (OOP Fundamentals)
- Mentor for the Part 1 Assistance centre - Semester 2 2023

PROJECTS

Portfolio Website (React Front end)

A small showcase of some of my favourite web design and some cool widgets I've made.

- GitHub Activity – **Retrieves GitHub activity** for work and personal accounts and **collates** it to display in **one feed**.
- Music Widget – Makes requests to a custom **AWS Lambda function** to retrieve activity data from **Spotify API**.

Findsly (React Front end)

Designed and developed a frontend website for an online shopping review collation service with over **170k MAUs**

- Used a Typescript and React based web stack to deploy in a Cloudflare environment and interface with API.

Wealth Tracker (NextJS Full Stack + NodeJS Worker)

Used agentic AI Tools to develop a full stack application to track my personal financials over time.

- Uses Akahu open banking APIs to periodically fetch and process data
- Provides a series of dashboards to provide detailed insights into the available data

House Bot (React & TypeScript/Bun Full stack)

Created a collaborative all in one solution for finding, reviewing, and tracking rental properties as a group.

- Can automatically synchronize with multiple sources to find new potential houses to be reviewed.
- Hosted locally through a **Cloudflare tunnel**, with custom built **automated CI/CD** using docker.

TECHNICAL SKILLS

- **Languages:** TypeScript/JavaScript, C#, Java, C, PHP, MATLAB, Python
- **Web Development:** React, Angular, Tailwind, ExpressJS, .NET MVC, SCSS, Web Workers, NextJS, Bun
- **Technologies:** Postgres, MongoDB, Git, GitHub, CI/CD, Prisma, Drizzle, Docker, Nginx, Azure

Interests / Hobbies

Formula 1, Home Labbing, Cloud infrastructure/networking, Agentic programming tools
